SECTION A. Description of project activity

A.1. Purpose and general description of project activity

The project installs 30 wind turbines of 1.6 MW each near the coast. The electricity is delivered to the regional grid and displaces power from coal-fired plants. The project installs 30 wind turbines of 1.6 MW each near the coast. The electricity is delivered to the regional grid and displaces power from coal-fired plants. The project installs 30 wind turbines of 1.6 MW each near the coast. The electricity is delivered to the regional grid and displaces power from coal-fired plants. The project installs 30 wind turbines of 1.6 MW each near the coast. The electricity is delivered to the regional grid and displaces power from coal-fired plants. The project installs 30 wind turbines of 1.6 MW each near the coast. The electricity is delivered to the regional grid and displaces power from coal-fired plants. The project installs 30 wind turbines of 1.6 MW each near the coast. The electricity is delivered to the regional grid and displaces power from coal-fired plants.

A.2. Location of project activity

The wind farm is located on Houhai peninsula, about 20 km from the city centre. The wind farm is located on Houhai peninsula, about 20 km from the city centre. The wind farm is located on Houhai peninsula, about 20 km from the city centre. The wind farm is located on Houhai peninsula, about 20 km from the city centre. The wind farm is located on Houhai peninsula, about 20 km from the city centre.

SECTION B. Application of selected approved baseline and monitoring methodology

B.1. Reference of methodology

The project applies the approved consolidated methodology ACM0002 version 12, Consolidated baseline methodology for grid-connected electricity generation from renewable sources. The project applies the approved consolidated methodology ACM0002 version 12, Consolidated baseline methodology for grid-connected electricity generation from renewable sources. The project applies the approved consolidated methodology ACM0002 version 12, Consolidated baseline methodology for grid-connected electricity generation from renewable sources. The project applies the approved consolidated methodology ACM0002 version 12, Consolidated baseline methodology for grid-connected electricity generation from renewable sources.

B.6.1. Explanation of methodological choices

The combined margin emission factor is calculated as a weighted average of the operating margin and build margin, with weights of 0.75 and 0.25 for wind projects. The combined margin emission factor is calculated as a weighted average of the operating margin and build margin, with weights of 0.75 and 0.25 for wind projects. The combined margin emission factor is calculated as a weighted average of the operating margin and build margin, with weights of 0.75 and 0.25 for wind projects. The combined margin emission factor is calculated as a weighted average of the operating margin and build margin, with weights of 0.75 and 0.25 for wind projects. The combined margin emission factor is calculated as a weighted average of the operating margin and build margin, with weights of 0.75 and 0.25 for wind projects.

B.6.4. Summary of the ex ante estimation of emission reductions

Year	Estimated reductions (tCO2e)
2012	61,240
2013	61,240
2014	61,240
Total	183,720
